

If you are successful in precluding XM Satellite Radio from presenting traffic and/or weather reports for local markets under the theory that is the domain of local broadcast stations alone, I trust then your ruling will be fair and equitable and preclude "conventional" national broadcasts, such as "Good Morning America" and "Today" from presenting "home town" weather in any given local market.

Please let me known when you'll be giving the order to cut Willard Scott and Al Roker.
